Key Features and Benefits

UHD 4K Dual Camera System
The super-wide 133° field of view and 10x Hybrid Zoom can make every participant and detail in the conference be seen clearly. Moreover, the image brightness can be automatically optimized even in a dim or backlight environment, ensuring the participant faces can be seen clearly.

Sound Localization for Full-Duplex Mode
8 MEMS microphone arrays make MeetingEye 600 have stronger ability of noise proof and dereverberation. The new upgraded audio algorithm, together with the technology of post-processing on acoustic echo cancellation and the dereverberation algorithm, brings high quality full-duplex call and realizes more precise voice pickup.

Smart Video Conferencing with AI Technology
Featuring AI technology, including Auto Framing and Speaker Tracking, MeetingEye 600 can not only automatically adjust the image size according to the number and the position of the participants, but also automatically zoom in the speaker without adjusting the camera, making the participants more focus on the conference. Additionally, with the collaboration of dual camera system, MeetingEye 600 can automatically select the suitable camera to track the participant, providing smarter video conference.

Secure Conference with Auto Camera Privacy Shutter
The camera privacy shutter automatically opens when the video conference starts and remains closed when not having video conferences. The lens status is visible at a glance, eliminating "lens anxiety" in daily conferences.
